

ACNM's Reducing Primary Cesareans Learning Collaborative ("RPC")

Do you know what your NTSV rate is? The Healthy People 2020 NTSV rate target is ≤ 23.9 percent! The Joint Commission will start publicly reporting on this in 2020!

JOIN RPC! ACNM's learning collaborative equips you to reduce NTSV cesareans by promoting physiologic birth. Participants in the 2016 RPC collaborative reduced their rates as much as 18 percent, with a median 8 percent reduction. If you are participating in AIM, the RPC change bundles can help you to implement the AIM Safe Reduction of Cesarean Birth Initiative.

HOW DOES IT WORK?

Your team will implement one of three "bundles" aimed at promoting physiologic birth. You will choose a bundle developed by interdisciplinary team of experts that addresses these primary drivers of cesarean section in low risk women:

- Intermittent Auscultation
- Promoting Spontaneous Labor Progress
- Promoting Comfort in Labor

WHAT YOU CAN EXPECT:

- Mentor guidance about implementation
- Participation in a learning community
- Data to support change
- Access to resources
- Implementation Guide to get you started → → →
- CE credits for your participation
- Access to monthly webinars

FOR MORE INFORMATION:

We now accept applications on a rolling basis. Information and materials for the application are posted on the Birthtools.org website. Watch our video that explains RPC!
